Noonan says that when he enter d the room he turned on the hot and cold water together. Then he turned off, as he supposed the hot water, intending to take a cold shower. Instead of turning off the hot water he turned off the cold. After that he remembers nothing. It is supposed the shock rendered him insensible.

According to Noonan he was in the bathroom about fifteen minutes before being overcome by the scalding water. If his estimate of time is right he was fifteen minutes under the shower of

The bath-house attendants say that the water was no warmer than usual last night, but the condition of Noonan shows that it must have been heated to the boiling point.

There is an appliance in the shower baths designed to prevent the accidental flooding of a bather with hot water, but it did not work in the case of Noonan.
